Name : yash chaudhari

PRN : 202501080014

Practice Lab Assignment: 2

1. Perform all List Operation, Dictionary Operations.

Code :

```
IDLE Shell 3.14.3
File  Edit  Shell  Debug  Options  Window  Help
Python 3.14.3 (tags/v3.14.3:323c59a, Feb  3 2026, 16:04:56) [MSC v.1944 64 bit (AMD64)] on win32
Enter "help" below or click "Help" above for more information.
>>> student={"Name":"Reshma Kumare", "Age":18, "Grades":[85,90,98]}
>>> print("Name:", student["Name"])
Name: Reshma Kumare
>>> student["PRN"] = 202501080017
>>> print("After adding PRN:", student)
After adding PRN: {'Name': 'Reshma Kumare', 'Age': 18, 'Grades': [85, 90, 98], 'PRN': 202501080017}
>>> student["Age"]=19
>>> print("After updating age:", student)
After updating age: {'Name': 'Reshma Kumare', 'Age': 19, 'Grades': [85, 90, 98], 'PRN': 202501080017}
>>> student.pop("Grades")
[85, 90, 98]
>>> print("After removing grades:", student)
After removing grades: {'Name': 'Reshma Kumare', 'Age': 19, 'PRN': 202501080017}
>>> keys=student.keys()
>>> print("Keys:", keys)
Keys: dict_keys(['Name', 'Age', 'PRN'])
>>> values=student.values()
>>> print("Values:", values)
Values: dict_values(['Reshma Kumare', 19, 202501080017])
>>> student_copy=student.copy()
>>> print("Copy of dictionary:", student_copy)
copy of dictionary: {'Name': 'Reshma Kumare', 'Age': 19, 'PRN': 202501080017}
>>> student.clear()
>>> print("After clear:", student)
After clear: {}
>>>
Ln: 10  Col: 0
```

Lab Assignment: 2

1. Select the number from the entered list and find its position in Python (use Linear Search).

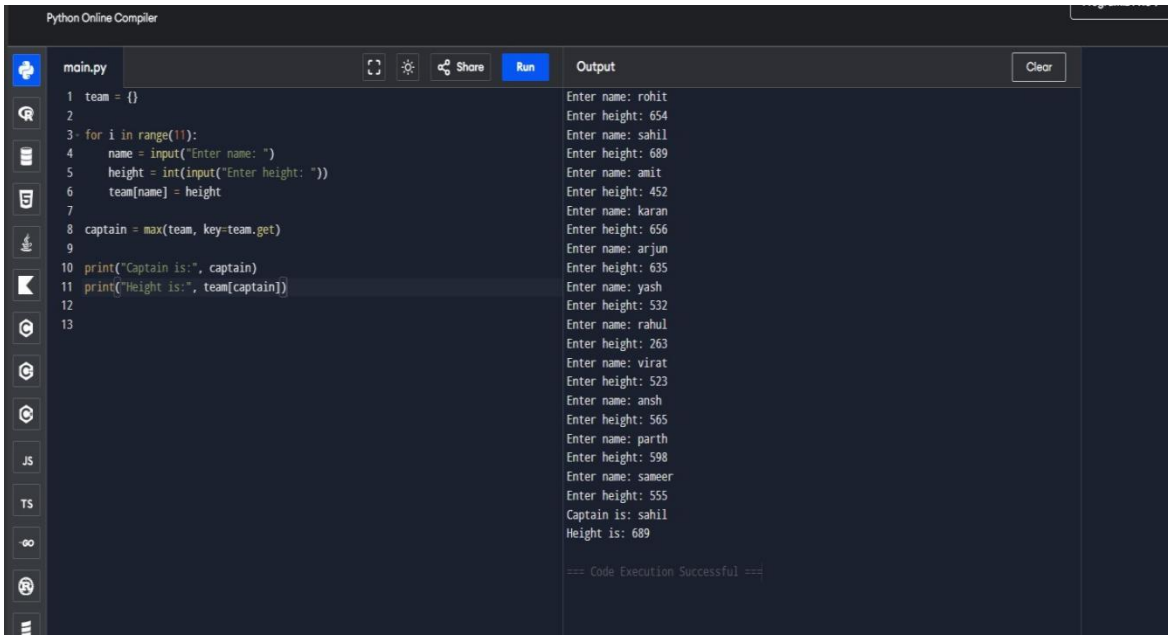
Code :

```
Programiz
Python Online Compiler

main.py                                   Share  Run        Output                    Clear
1  lst = []                                                  Enter number of elements: 6
2  n = int(input("Enter number of elements: "))              Enter number: 456
3  for i in range(n):                                        Enter number: 788
4      lst.append(int(input("Enter number: "))               Enter number: 658
5  x = int(input("Enter number to search: "))                Enter number: 699
6  for i in range(n):                                        Enter number: 456
7      if lst[i] == x:                                       Enter number: 789
8          print("Position:", i+1)                           Enter number to search: 788
9          break                                             Position: 2
10 else:
11     print("Number not found")                             === Code Execution Successful ===
12
13
```

2. Choose cricket team of eleven players find the captain of the team (consider tallest person as a captain) using dictionary.

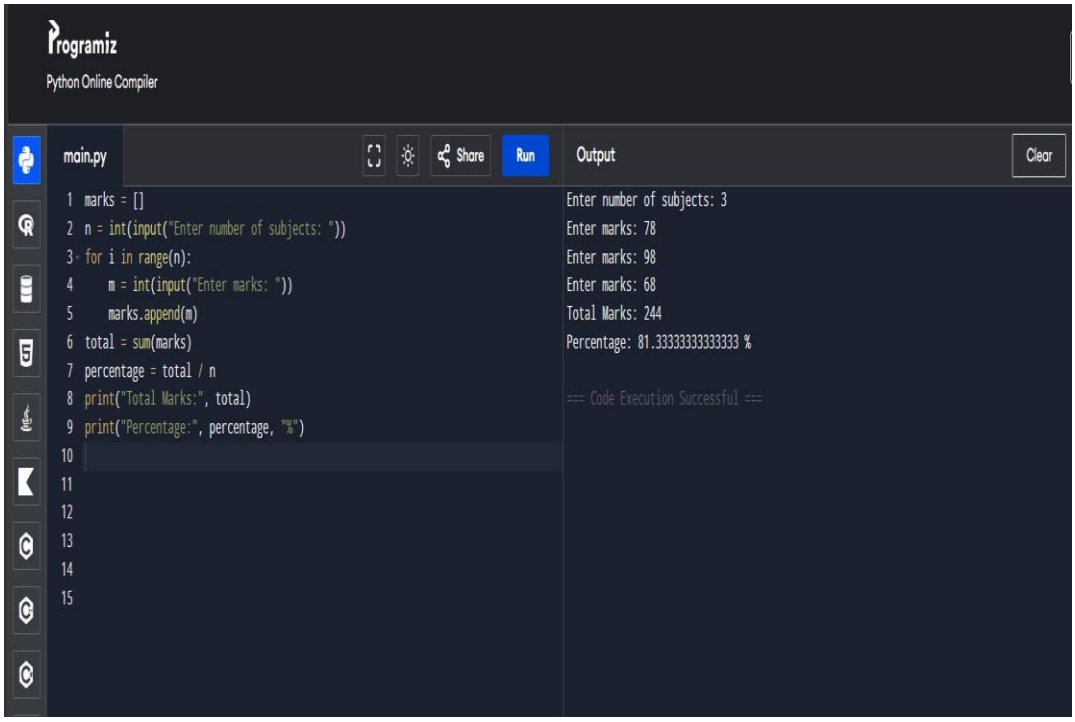
Code :



Self Study Assignment: 2

1. Consider the student subjects marks are stored in the list. Find the total marks and percentage of students.

Code :



2. Perform all tuple operations.

Code :

```
IDLE Shell 3.14.3
File  Edit  Shell  Debug  Options  Window  Help
Python 3.14.3 (tags/v3.14.3:323c59a, Feb  3 2026, 16:04:56) [MSC v.1944 64 bit (AMD64)] on win32
Enter "help" below or click "Help" above for more information.
>>> t = (10, 20, 30, 40, 50)
>>> print("Tuple:", t)
Tuple: (10, 20, 30, 40, 50)
>>> print("Length:", len(t))
Length: 5
>>> print("First element:", t[0])
First element: 10
>>> print("slice:", t[1:4])
slice: (20, 30, 40)
>>> print("Count of 20:", t.count(20))
Count of 20: 1
>>> print("index of 30:", t.index(30))
index of 30: 2
>>> t2 = (60, 70)
>>> print("After adding:", t+t2)
After adding: (10, 20, 30, 40, 50, 60, 70)
>>>
```
